**Comment:**

I am very concerned about the negative health consequences of ingesting milk and milk products from cows treated with Bovine Growth Hormone. I have completely ceased buying all US produced milk/cheese/milk products because of this. I urge you to regulate the use of this hormone and insist that it be discontinued. It is pretty clear to me that BGH is responsible for some of the increasing incidence of breast and other cancers. I simply do not believe that it is harmless.
